

ABSTRACT OF THE DISCLOSURE

A method of forming an overlay (310) having a surface energy charge for verifying an image (210) on printing plates (300) formed by creating an imaged receiver sheet (140) having an image, a first thermal print layer (224), and
5 a first support layer (150). An imageless receiver sheet (160) is laminated having a second thermal print layer (228) and a clear second support layer (170) with the imaged receiver sheet thereby encapsulating the image. The first support layer is removed.
